DATABASE DEVELOPER

As IT Specialist, job specialization Dev Engineer at X you design, develop, and support complex application solutions with the aim to meet as closely as possible the specific needs and wishes of our (internal) customers. You have every opportunity to apply the knowledge and experience you have gained elsewhere to develop functionalities which contribute fundamentally to the safe and secure X's service to its customers.

As part of a Squad, you deliver business value across the entire end-to-end application chain together with his/her Squad on the Global Data Warehouse. You understand the complete stack from application to hardware. You understand the detailed workflow of the application, expected transactional volumes, the detailed technical behavior of application servers and databases and the importance of maintaining a high security profile, safeguarding the Confidentiality, Integrity and Availability of X data and information assets.

Your role is very varied and no two days are the same, but your main tasks / deliverables are:

1. Analyzing and Designing, Developing and Adapting the complex software applications;
2. Integrating programs and functionality on multiple platforms;
3. Performing tests of various types
4. Driving Continuous Delivery improvements..

Additionally, you're making a concrete contribution to make optimal running of the Scrum process. Because good teamwork in our view is essential for achieving the best results, we also find it very important that you play a positive role within your team.

Your work environment

The focus is on high-quality secure-critical software delivered in time.

Main development technologies include: Sybase IQ and ASE, Java and Perl all running on the Linux OS. We will be migrating to Oracle technology in one year.

We are looking for a driven and analytical Database Developer (Sybase / Oracle / SQL Server) You are able to quickly analyze needs and wishes of users and has the technical skills to develop the most secure and reliable applications. You feel personally responsible for the goal that you pursue with your team, you take where necessary leadership to help your immediate colleagues to achieve the common goal and you have the social skills to fulfill this role.

As the application you're working with contains confidential information, you will have to comply to the Insider regulations.

You also have:

- A completed study at least at HBO level;
- At least 5 years of experience in a relevant (IT) function within a development environment of a large and complex organization
- Senior expertise in Database (Sybase / Oracle / SQL Server)
- At least 3 years of experience of working in large data warehouses (> 1 TB)
- Extensive banking experience, preferably in the area of Risk.
- Experience with working in cross-functional BizDevOps teams using the Agile / Scrum methodology
- Experience with automating working processes

You are also proficient in the Dutch and English language written as well as verbally and are able to learn quickly new techniques.

Locatie: Amsterdam / Opdracht: Deta-vast

Een intakegesprek wordt standaard ingepland alvorens het cv eventueel bij de opdrachtgever wordt voorgesteld, bovendien zal er minimaal één referentie van je gevraagd worden.
