DEV ENGINEER

Your role and key responsibilities

Typical Dev Engineer tasks are analysis, design, building code or configuring a 3rd party software package, deploying, testing and driving Continuous Integration and Delivery improvements.

As a DevEngineer you will need to:

- Have strong knowledge of Java development (must). You know the difference between the frameworks and know which to apply depending on the require
- Have knowledge of Continuous Integration tools like: GIT, Sonar, Jenkins, Fortify and able to configure these tools
- Have experience with Continuous Delivery tools like: Ansible and TFS
- Have experience with Oracle and Middleware like JBOSS
- Be experienced in Agile and Continuous Delivery practices
- Have good social and communication skills
- Be pro-active and assertive
- Have a learning attitude. Not only to master new technologies and programming languages, but also on the interpersonal level. You are proven to be able to ask and give feedback
- Have experience with working in multicultural /diverse teams
- Have an excellent written and spoken knowledge of English

Locatie: Amsterdam / Opdracht: deta-vast (minimaal een jaar)

Een intakegesprek (via videocall) wordt standaard ingepland alvorens het cv eventueel bij de opdrachtgever wordt voorgesteld, bovendien zal er minimaal één referentie van je gevraagd worden.
