Full-stack developer

FULLSTACK DEVELOPER

Role as Full Stack Developer

Client provides a full fledged ecommerce solution with its own REST API running on Laravel framework. The extensive API is built using best practices and design patterns. Our front-end is built on the Angular framework. As a developer you will be responsible for designing and implementing new features, work on integration and interfacing with client systems and work in a diverse and highly motivated team in an agile manner. Your stack and skills should look quite like the below. But of course, it's not a problem if it is not a perfect match with your profile. We think the right mindset is more important than a perfectly matched skillset. If you are willing to learn and improve yourself, we are willing to help you!

Skillset

Languages	Framewok	Integrations
Javascript	Vue	Api's
CSS	Angular	Api Architecture
Typescript	Laravel/PHP	Plugin Integrations

Libraries
Jquery

DevOps
Git
